

PART 1

COMMAND ELEMENT PROGRAMS

The Command Element (CE) of each MAGTF is task-organized to provide command, control, communications, computers, and intelligence — and interoperability with other joint forces and systems — to facilitate the effective planning and execution of Marine Corps power projection operations. MAGTF C4I provides commanders with a common tactical picture and the means to deal with the increasingly complex modern battlefield. It allows Marine Corps units to send, receive, process, filter, store, and display key data needed for tactical decision-making.

This section provides basic descriptions of Marine Corps C4I programs/systems under development or scheduled for procurement or fielding during FY 2004-2005.
